

MyBEDSIDE NOTES

INFORMATION WHEN YOU NEED IT MOST

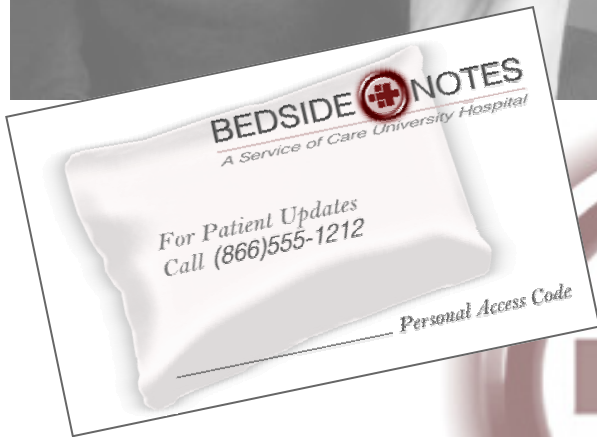

Critical Care Communication

- ⊕ Automated ICCU Patient Updates
- ⊕ Keep Families Informed Without Interruption
- ⊕ Devote More Time to Patient Care
- ⊕ Improve Hospital Satisfaction Rating
- ⊕ HIPAA Compliant

The Comfort of Knowing.

Automate Patient Updates

MyBedside Notes critical care communication system relieves the burden of constant interruption from patient's friends and family members looking for updates.

Improve Patient Care -

Free-up valuable time by automating the way you deliver updated patient conditions. MyBedside Notes gives you more time to focus on patients.

Improve Customers Satisfaction -

Get critical information to loved ones in the most timely and efficient way possible. Family members now have the latest updates available 24 hours a day - seven days a week.

HIPAA Secure -

Provide a unique patient identifier and access code - patient health information is protected.

How It Works

During the patient's admission process, staff assign a personal access code into the MyBedside Notes system. The patient's primary emergency contact is given the personal access code along with a phone number to call the system and listen to patient updates.

ICCU Nurses and Doctors can record patient updates into the system as they become available.

The patient's emergency contact, or medical guardian, is solely responsible for distributing the phone number and personal access code to friends and family members, compliant with HIPAA rules.

SAMPLE NOTE:

"Today is May 2, it is 7:00 AM. The patient has rested well this evening. He has not complained of any discomfort or pain. He sleeps unless he is wakened by staff. He weaned well this evening from the ventilator. Dr. Stevens was in at 8:00 PM and suggests that his breathing tube be removed in the morning of May 3rd. His blood pressure and heart rate are stable. There have been no changes to his medications at this time. A test for his heart, called an echocardiogram, will be performed on May 3rd at 9:00 AM."
